Religence CRM

Complete guide to Lead Discovery, pipeline management, email outreach, and reporting for pharmaceutical sales teams.

Version 1.0 · June 2026

For sales reps, business development, and CRM administrators

Table of Contents

1. Introduction	3
2. Getting Started & Navigation	4
3. Understanding CRM Concepts	6
4. Setting Up Master Data	8
5. Lead Discovery	11
6. Saving Prospects to CRM	14
7. Verification Queue	16
8. Active Leads Pipeline	17
9. Email Templates & Outreach	20
10. Inbox & Email Management	23
11. Saved Contacts	25
12. Reports & Analytics	26
13. Daily Workflow & Best Practices	28
14. Troubleshooting & Data Notes	29

1. Introduction

Religence CRM is a pharmaceutical customer relationship management application designed for API salt and branded medicine outreach. It helps your team discover manufacturers and marketers, qualify prospects, manage an active sales pipeline, send templated emails, track conversations, and measure performance — all from a single dashboard.

Who This Guide Is For

- **Sales representatives** managing day-to-day lead follow-up and email outreach
- **Business development managers** overseeing pipeline health and team activity
- **CRM administrators** maintaining salts, medicines, and email templates

What You Can Do

- Search for companies by API salt and branded medicine using Lead Discovery
- Save verified prospects as contacts and active leads
- Track leads through a structured pipeline from first save to Won/Lost
- Send personalized emails using merge-field templates
- Manage inbound and outbound mail in a unified Inbox
- Review KPIs, pipeline breakdown, and outreach activity in Reports
- Maintain master lists of salts and medicines under Settings

How This Guide Is Organized

Sections follow the natural workflow: configure master data → discover prospects → save and verify → manage pipeline → communicate → analyze results. Each chapter includes step-by-step instructions, tips for effective use, and notes on how screens connect to each other.

Recommended first-time setup: Configure Salts Master and Medicine Master (Chapter 4), review default Email Templates (Chapter 9), then run your first Lead Discovery session (Chapter 5).

2. Getting Started & Navigation

2.1 Signing In

Open the application URL in your browser. The login screen is the entry point (`/` route).

- **Demo login:** Use `adminnextjs@gmail.com` / `1234567890` on the Next.js tab for immediate access.
- After successful sign-in, you are redirected to **Active Leads** — the default home screen.

2.2 Main Navigation (Sidebar)

The left sidebar organizes all CRM modules under the **CRM** section:

Menu Item	Route	Purpose
Active Leads	<code>/active-leads</code>	Pipeline table and lead management (home)
Lead Discovery	<code>/lead-discovery</code>	Find companies by salt and medicine
Inbox	<code>/inbox</code>	Email conversations and compose
Saved Contact	<code>/contacts</code>	Contact directory
Reports	<code>/reports</code>	Analytics dashboard
Settings ▸ Email Templates	<code>/templates</code>	Outreach template editor
Settings ▸ Salts Master	<code>/settings/salts</code>	API salt catalog
Settings ▸ Medicine Master	<code>/settings/medicines</code>	Branded medicine catalog

Hidden routes: Verification Queue (`/verification-queue`) and Settings hub (`/settings`) are not in the sidebar but are linked from other screens. Bookmark Verification Queue if your team uses formal lead approval.

2.3 Application Layout

Every CRM screen shares a consistent layout:

- **Header** — global search, notifications, profile, and theme switcher
- **Sidebar** — primary navigation; collapsible on smaller screens
- **Content area** — module-specific tables, charts, and panels

2.4 Common UI Patterns

Religence reuses familiar patterns across modules. Recognizing them speeds up learning:

Split-pane master screens

Salts Master, Medicine Master, and Email Templates use a **library panel** (left) with search and pagination, plus an **editor panel** (right). Select a row to edit; use **New** to create custom entries.

Drawers and modals

Lead details, company profiles, and contact records open in **right-side drawers** without leaving the current page. Email sending and save-to-contact actions use **modals** (center overlays).

Tables with filters

Active Leads, Contacts, and discovery panels support search, dropdown filters, pagination, and row click to drill down.

Status badges

Pipeline stages, lead scores, dosage forms, and template categories appear as color-coded badges for quick scanning.

Use the theme switcher in the header for light or dark mode. Note: clearing all browser storage via the theme switcher can also erase CRM data — see Chapter 14.

3. Understanding CRM Concepts

3.1 Core Entities

Entity	Description
Company	A manufacturer, marketer, or exporter saved from discovery (name, location, certification, website)
Contact	A person at a company (name, role, email, phone) linked to one company
Lead	An active sales opportunity with stage, score, assignee, follow-up date, and product match
Deal	A commercial opportunity record created when a lead reaches Won or via Close Deal
Email	Inbound or outbound message, optionally linked to a lead
Timeline event	Audit entry for stage changes, emails, notes, verification, and deals

3.2 Salts, Medicines, and Leads

The product hierarchy drives discovery and lead matching:

- **Salt (API)** — active pharmaceutical ingredient, e.g. Budesonide
- **Medicine** — branded product linked to one salt, e.g. Budecort Respules (Respules)
- **Lead product match** — each lead stores matched salt name, medicine name, and dosage form

In Lead Discovery, you select salts → medicines appear → companies matching the active medicine are shown. When saved, this product context flows into the lead record and email templates.

3.3 Lead Pipeline Stages

Every lead progresses through defined stages. Understanding stage order is essential for effective pipeline management.

Saved → Verified → Intro Email Sent → Follow-up Sent → Replied → Sample Requested → Quotation Sent → Negotiation → Won / Lost / Dormant

Stage	Meaning	Typical Next Action
Saved	New from discovery; not yet approved	Verify in queue or drawer
Verified	Approved for outreach	Send intro email
Intro Email Sent	First outreach delivered	Wait or send follow-up
Follow-up Sent	Second touch sent	Monitor inbox for reply
Replied	Prospect responded	Qualify interest; request sample
Sample Requested	Sample stage active	Prepare quotation
Quotation Sent	Commercial offer shared	Negotiate terms
Negotiation	Active deal discussion	Close deal
Won / Lost / Dormant	Terminal states	Archive or re-engage later

Automatic stage updates: Sending email from Active Leads advances the stage (e.g. Verified → Intro Email Sent). Linking an inbound reply in Inbox can move Intro/Follow-up stages to Replied.

4. Setting Up Master Data

Before heavy prospecting, review your Salts Master and Medicine Master. These catalogs power Lead Discovery filtering and appear on lead records throughout the CRM.

4.1 Salts Master (</settings/salts>)

Layout: Paginated table (left) + editor (right)

Table columns

- **#** — row number
- **Salt name** — API name (click row to select)
- **Meds** — count of linked medicines
- **Type** — Built-in (default 18 salts) or Custom

Actions

- **Search** — filter salts by name
- **New salt** — add a custom salt (opens in editor as "Untitled salt")
- **Save changes** — persist name edits (updates matched salt on linked leads)
- **Reset** — restore built-in salt to default name
- **Delete** — remove custom salt (only if no medicines or leads reference it)
- **Reset all** — restore entire default salt list
- **Lead Discovery** — jump to discovery with current catalog

4.2 Medicine Master (</settings/medicines>)

Medicines are branded products mapped to a salt. Each medicine has a name, linked salt, and dosage form.

Table columns

- **Medicine** — branded product name
- **Salt** — parent API (shown on wider screens)
- **Form** — dosage form badge (Tablet, Respules, Inhaler, etc.)
- **Type** — Built-in or Custom

Editor fields

- **Medicine name** — e.g. Budecort Respules
- **Linked salt** — dropdown of all salts in Salts Master
- **Dosage form** — Tablet, Capsule, Syrup, Injection, Inhaler, Respules, Cream, Ointment, Nasal Spray, Drops

Rules

- Built-in medicines (26 defaults) can be edited and reset but not deleted
- Custom medicines can be deleted only when no active leads reference the medicine name
- Renaming a medicine updates **matchedMedicine** on all linked leads

Admin tip: Add custom salts first, then medicines linked to those salts. New entries appear in Lead Discovery immediately after save — no restart required.

4.3 Master Data Best Practices

Do

- Use consistent salt naming (match pharmacopoeia names)
- Link every medicine to the correct salt before discovery
- Review built-in defaults before adding duplicates
- Use Custom badge entries for new product lines

Avoid

- Deleting salts that still have medicines linked
- Renaming salts/medicines without checking lead reports
- Using Reset all during active campaigns
- Creating duplicate medicine names under different salts

4.4 Data Persistence

Salts, medicines, templates, leads, contacts, emails, and all CRM records are saved automatically to your browser's local storage (key: `religence-crm-v1`). Changes persist across sessions on the same browser and device. See Chapter 14 for backup and reset considerations.

5. Lead Discovery

Lead Discovery (`/lead-discovery`) is a three-panel prospecting workspace for finding companies by API salt and branded medicine.

5.1 Panel Layout

Panel	Position	Function
Salts	Left	Checkbox list of all salts; search and pagination
Medicines	Center	Medicines for checked salts; set one as active
Results	Right	Companies matching the active medicine

5.2 Step-by-Step Discovery

1. Open **Lead Discovery** from the sidebar.
2. In the **Salts** panel, check one or more salts relevant to your campaign.
3. The **Medicines** panel auto-populates with linked products. All medicines are selected by default when salts change.
4. Click a medicine row to set it as **active** (highlighted). The Results panel updates.
5. Review companies: name, type (Manufacturer/Marketer/Exporter), location, and lead score.
6. Click a company name to open the **Company Profile** drawer.

5.3 Company Profile Drawer

The profile drawer provides deep context before saving a prospect to CRM.

Tabs

- **Overview** — company narrative, matched salt/medicine/dosage, website, AI summary, match reasons
- **Products** — product list associated with the match
- **Contacts** — known contacts with role, email, and phone
- **Certifications** — WHO-GMP, ISO, and other badges
- **Source Proof** — external reference links
- **AI Notes** — automated research notes

Status indicators

- **Saved to CRM** — company already exists; may link to existing lead
- **Save to Contact** — primary button to add to CRM (see Chapter 6)

5.4 Discovery Tips

- Start with one salt when learning the interface; expand to multi-salt searches for portfolio campaigns
- Sort mentally by lead score in Results — higher scores indicate stronger matches
- Use pagination in Salts/Medicines panels for large catalogs
- Re-check master data if expected medicines do not appear after selecting a salt

5.5 Empty States & Troubleshooting Discovery

Situation	Cause	Action
No medicines shown	No salt checked	Check at least one salt in left panel
No companies shown	No active medicine selected	Click a medicine row in center panel
Expected medicine missing	Not in Medicine Master or wrong salt link	Add or fix in Settings ► Medicine Master
Custom salt shows no medicines	No medicines linked yet	Create medicine with that salt in Medicine Master

Multi-salt campaigns: When multiple salts are checked, the Medicines panel shows a Salt column to distinguish products. Filter using search within each panel to narrow large result sets quickly.

Discovery company data is matched from a catalog keyed by medicine ID. Custom medicines you add will appear in the medicines panel but may show generated default companies until a full catalog is configured for that product in your deployment.

6. Saving Prospects to CRM

When you find a promising company in Lead Discovery, use **Save to Contact** from the Company Profile drawer.

6.1 Save Options

Option	Creates	Best For
Save company only	Company record	Research phase; no contact yet
Save company + contact	Company + contact	Known contact, no active deal
Save and create active lead	Company + contact + lead (Saved stage)	Standard pipeline entry
Save and start email outreach	Same as above + opens Send Email	Ready-to-contact prospects

6.2 Contact Selection

If the company profile lists multiple contacts, choose the **Primary contact** from the dropdown before saving. The selected contact's email and role flow into the lead record.

6.3 After Saving

- **Company only / + contact:** Toast confirmation; remain on discovery or visit Saved Contact
- **Create lead:** Redirects to Active Leads with lead drawer open (`?lead=`)
- **Start outreach:** Redirects to Active Leads with Send Email modal (`?compose=`)

If the company is **Already in CRM**, saving updates existing records rather than creating duplicates. Check the status badge in the profile drawer before saving.

6.4 What Gets Created

When you save with a lead, Religence creates interconnected records:

- **Lead title** — formatted as *{medicine} — {company}*
- **Product match** — salt name, medicine name, and dosage form from discovery context
- **Stage** — starts at **Saved** (requires verification before outreach in strict workflows)
- **Lead score** — carried from discovery company score
- **Source links** — proof URLs from the company profile
- **Timeline** — initial event logged for audit trail

6.5 Effective Save Strategy

1. Review company profile thoroughly (certifications, contacts, source proof)
2. Save as lead (not company-only) when you intend to follow up within 7 days
3. Use "Start email outreach" only after verification if your team requires it
4. Assign the lead to the correct rep in Active Leads after save

7. Verification Queue

The Verification Queue (`/verification-queue`) lists all leads at the **Saved** stage awaiting approval before outreach.

7.1 When to Use

Teams with a qualification gate use this screen daily. Managers review new discovery saves for data quality and strategic fit before reps send emails.

7.2 Screen Elements

- **Pending count badge** — number of Saved leads
- **Table columns:** Lead, Company, Salt/Medicine, Stage, Score, Actions
- **Verify** — moves lead to **Verified** and logs timeline event
- **Review** — opens lead in Active Leads drawer
- **Source** — returns to Lead Discovery

7.3 Alternative Verification Path

You can also verify from the **Active Leads** detail drawer: when stage is Saved, a **Verify** button appears in the stage bar. Both paths produce the same result.

Bookmark `/verification-queue` — this route is not in the sidebar. Consider adding it to team onboarding materials.

8. Active Leads Pipeline

Active Leads (`/active-leads`) is your daily command center for managing the sales pipeline.

8.1 Dashboard KPIs

Four stat cards at the top summarize pipeline health:

- **Total leads** — all leads in CRM
- **In pipeline** — non-terminal stages
- **Closed** — Won, Lost, and Dormant combined
- **Follow-up due** — leads with follow-up in the next 3 days

8.2 Filtering & Views

- **Pipeline tabs:** All | Pipeline | Closed
- **Search:** lead title, company, contact, salt
- **Filters:** Stage, Salt, Assignee — use Clear to reset
- **Stage chips:** quick-filter by stage with live counts

8.3 Lead Table

Columns include avatar, lead & company, contact & assignee, product match (salt/medicine/dosage), stage badge, score, follow-up date. Click any row to open the detail drawer.

8.4 Lead Detail Drawer

Stage bar

- **Stage dropdown** — manually set any stage
- **Verify** — visible when stage is Saved
- **Advance** — move to next pipeline stage
- **Dormant / Lost** — mark terminal inactive states

Tabs

- **Overview** — company, contact (mailto link), product match, source links, deals, dates
- **Timeline** — chronological audit of all activities
- **Emails** — thread history; Send email button
- **Notes** — free-text notes; auto-save on blur or explicit Save

Footer actions

- **Send email** — opens template-based compose modal
- **Close deal** — creates deal record when in Negotiation

8.5 Creating Leads Manually

Click **New lead** to open the creation modal. Requires an existing company (from discovery save). Fill title, optional contact, salt/medicine/dosage, stage, and assignee. Useful for referrals or trade-show contacts not found in discovery.

8.6 Deep Links

Active Leads supports URL parameters for direct navigation:

- `/active-leads?lead={id}` — open specific lead drawer
- `/active-leads?compose={id}` — open Send Email modal for lead
- `/active-leads?company={id}` — filter to company's leads

8.7 Pipeline Management Tips

Daily habits

- Sort by follow-up due each morning
- Advance or update stage after every touch
- Log notes after calls (even brief ones)
- Review Replied leads before sending bulk follow-ups

Weekly habits

- Clear Verification Queue if used
- Review Lost/Dormant for re-engagement
- Check Reports for stage bottlenecks
- Refresh email templates for active salts

9. Email Templates & Outreach

Email Templates (`/templates`) manage merge-field templates used when sending from Active Leads and Inbox.

9.1 Template Library

The left panel lists all templates with category badges:

- **Introduction** — first outreach (e.g. First Introduction, Salt-specific Outreach)
- **Follow-up** — second touch after no reply
- **Quotation** — post-quotation reminders

9.2 Editing Templates

Select a template to edit in the right panel:

- **Template name** and **Description**
- **Category** — Introduction, Follow-up, or Quotation
- **Subject** and **Body** with merge field support

9.3 Merge Fields

Field	Inserts
{{company_name}}	Lead's company name
{{contact_name}}	Primary contact name
{{salt_name}}	Matched API salt
{{medicine_name}}	Matched medicine
{{dosage_form}}	Dosage form
{{sender_name}}	Current user (Priya Sharma by default)

9.4 Using Merge Fields

1. Click a merge field chip to insert at cursor position
2. Use **Insert here** toggle to target Subject vs Body
3. Switch to **Preview** tab to see rendered output
4. Select **Sample data** or a real lead for preview context

9.5 Template Actions

- **New template** — create custom template
- **Save changes** — persist edits (Unsaved badge when dirty)
- **Reset** — restore built-in template to default
- **Delete** — remove custom templates only
- **Reset all** — restore all four default templates

9.6 Sending Email from Active Leads

1. Open lead drawer → **Send email**
2. Select template from dropdown (auto-fills subject and body)
3. Edit message if needed
4. If Gmail not connected, click **Connect Gmail** first
5. Click **Send & update stage**

Sending logs the email to Inbox and lead thread, advances pipeline stage, sets follow-up +5 days, and adds a timeline event.

9.7 Outreach Best Practices

- Always preview templates with a real lead before bulk sends
- Customize salt-specific outreach for high-value API campaigns
- Match template category to lead stage (intro vs follow-up vs quotation)
- Keep subject lines under 60 characters for mobile readability
- Include a clear call-to-action (call, sample request, portfolio share)

Template hygiene: Review templates quarterly. Update sender name, certification mentions, and product names when your portfolio changes. Use Reset on built-ins if edits go off-track.

9.8 Gmail Connection (Demo Mode)

Religence uses a simulated Gmail connection for demonstration. Clicking Connect Gmail sets the connected flag and enables compose/send. In production deployment, this would integrate with Google OAuth. Sent emails appear in Inbox (Sent folder) and on the lead's Emails tab.

10. Inbox & Email Management

The Inbox (`/inbox`) provides a four-column email workspace connected to CRM leads.

10.1 Layout

1. **Folder sidebar** — Compose, profile, folders, labels, contacts
2. **Message list** — search, star, checkboxes, folder filtering
3. **Reading pane** — full message with actions
4. **Contacts rail** — quick compose to saved contacts

10.2 Folders

All Mails, Inbox (unread count), Sent, Drafts, Spam, Important/Starred, Trash, Archive. Folder counts update from CRM email records and session filters.

10.3 Connecting Gmail

Click **Connect Gmail** in the Inbox sidebar before composing. Profile shows

`sales@religence.example.com` when connected. Demo mode injects sample inbound messages on first connect.

10.4 Message Actions

- **Link to lead** — associate unlinked inbound email with a lead (can advance stage to Replied)
- **Open lead** — navigate to linked lead when leadId is set
- **Reply** — send response via CRM (updates lead stage like pipeline send)
- **Star, Archive, Delete** — organize messages (session state; see note below)

10.5 Compose

Click **Compose Mail** (requires Gmail connected). Enter To, Subject, Body. Sent messages appear in Sent folder and log to CRM if linked to a lead.

10.6 Labels

Filter by tags: finance (Mall), internal (Home), lead (Work), unlinked (Friends). Useful for triaging mixed inbound mail.

Session-only state: Starred, read/unread, archived, and trashed flags reset on browser refresh. CRM-persisted emails (subject, body, lead link) remain in local storage.

11. Saved Contacts

Saved Contact (`/contacts`) is your directory of all contacts saved from discovery or manual entry.

11.1 Summary Stats

Cards show: Saved contacts count, contacts with leads, unique companies, and active links.

11.2 Finding Contacts

- **Search** — name, email, role, company name
- **Company filter** — narrow to one organization
- **Sort** — Name A–Z, Company, Newest first
- **Pagination** — 12 contacts per page

11.3 Contact Table

Each row shows avatar, contact details, company block, lead count badge (links to filtered Active Leads), saved date, and action icons (email, view details).

11.4 Contact Detail Drawer

- Full identity and saved date
- **Send email** (mailto), **Call** (if phone), **View company leads**
- Company section with location and type
- Linked leads list — click to open lead drawer or send email modal
- Discovery source link when available

12. Reports & Analytics

Reports (`/reports`) is a live analytics dashboard built from current CRM data — no separate export step required.

12.1 KPI Cards

Top row shows sales-style metrics with trend indicators: total leads, pipeline value indicators, contact counts, and activity summaries. Cards link to relevant modules.

12.2 Charts & Widgets

- **Recent Outreach** — latest emails with link to Inbox
- **Pipeline Overview** — stage distribution chart
- **Activities** — recent timeline highlights
- **Revenue Analytics** — deal value trends
- **Leads By Source** — donut chart of lead origins
- **Deals Status** — Open/Won/Lost breakdown
- **Weekly Activity** — activity volume over time
- **Win Rate** — radial chart with conversion stats
- **Top API Salts** — lead count by matchedSalt

12.3 Tables

- **Follow-up Tasks** — active and completed tabs from lead follow-up dates
- **Recent Contacts** — newest saved contacts
- **Pipeline Breakdown** — company, contact, salt, stage, assignee, score
- **Active Pipeline** — full pipeline table with link to Active Leads

12.4 Using Reports Effectively

Managers

- Check Pipeline Overview for stage bottlenecks weekly
- Review Top API Salts to align discovery focus
- Monitor Follow-up Tasks for overdue reps
- Track Win Rate trends month-over-month

Reps

- Start day with Follow-up Tasks tab
- Use Recent Outreach to continue conversations
- Check your assignee rows in Pipeline Breakdown

Reports refresh automatically when CRM data changes. Keep lead stages and follow-up dates current for accurate analytics.

13. Daily Workflow & Best Practices

13.1 Recommended Daily Flow

1. **Morning (15 min):** Open Reports → Follow-up Tasks; work overdue items in Active Leads
2. **Mid-morning (30 min):** Process Inbox replies; link unlinked messages; advance Replied leads
3. **Prospecting block (45 min):** Lead Discovery for target salt → save 3–5 qualified companies
4. **Outreach block (30 min):** Send templated emails to Verified leads; update stages
5. **End of day (10 min):** Update notes, set follow-up dates, clear Verification Queue items

13.2 Team Roles

Role	Primary Screens	Key Actions
Sales Rep	Active Leads, Inbox, Discovery	Follow-up, email, save prospects
BD Manager	Reports, Verification Queue	Approve leads, review pipeline
Admin	Salts/Medicine Master, Templates	Maintain catalogs and templates

13.3 Data Quality Rules

- One lead per company-medicine combination unless strategically justified
- Always verify Saved leads before first email in gated workflows
- Keep product match fields accurate — they drive templates and reports
- Log every significant call or meeting in lead notes

14. Troubleshooting & Data Notes

14.1 Common Issues

Problem	Solution
Data disappeared after browser clear	CRM uses localStorage; avoid clearing all site data
Templates/salts reverted unexpectedly	Reset all was clicked; use Save diligently
Cannot delete salt/medicine	Remove linked records first (medicines/leads)
Compose disabled in Inbox	Connect Gmail from sidebar first
Lead not in discovery results	Company catalog is per medicine; check active medicine selection
Merge fields show blank in preview	Select a lead with complete product match data
Verification Queue empty	No leads at Saved stage; check Active Leads filters

14.2 Data Storage

All CRM entities persist under localStorage key `religence-crm-v1`. Theme preferences use separate keys (`ynex*`). The theme switcher's "Reset all" may wipe CRM data — use with caution.

14.3 Browser Recommendations

Use Chrome or Edge for best compatibility. Keep one primary browser/device for CRM work to avoid split data. For team deployments, plan migration to a shared backend before multi-user production use.

Quick Reference

Essential Routes

Task	Go To
Manage pipeline	/active-leads
Find new prospects	/lead-discovery
Read/send email	/inbox
Find a contact	/contacts
View KPIs	/reports
Approve new leads	/verification-queue
Edit email templates	/templates
Manage salts	/settings/salts
Manage medicines	/settings/medicines

Keyboard & UX Tips

- Press **Escape** to close drawers and modals
- Use search boxes before scrolling long tables
- Watch for Unsaved badges before navigating away from editors
- Follow-up due KPI → prioritize those leads each morning
